

Singapore Defense Tech Hackathon

A5X | Global Innovation & Venture Summit · 25 to 27 September 2026 · NUS Enterprise @ i3

2-Day Track: Deliverables

Submit into the group chat by 12.00 pm, Sunday 27 September

FIVE THINGS WE NEED TO SEE

1. What is new here?

Name what already exists, and say exactly what yours does that it does not.

2. Which task does it change, and for whom?

Name the person or unit, the job they do today, and what changes for them in Singapore's conditions.

3. Does it work on real input?

Show it running, against a stated baseline, including where it breaks.

4. Would someone pay for it?

One line on who would buy this, and whether your team would keep building it.

5. Can you say all of it in 3 minutes?

Be specific, skip the padding, and answer questions directly.

WHAT TO SUBMIT

Demo video

The prototype working, on real input where you can. If the working part is in simulation, record the simulation. Show the thing running, not slides.

Pitch deck

3 min

Spoken to, not read from. One slide for each of these, in this order:

- What exists today, and what is new about yours
- Who uses it, and the one task it changes
- How it works
- The demo, with numbers against a stated baseline
- Limits: what is stubbed, what breaks it, and your biggest doubt
- Who would pay, and where it goes next

Technical archive

1 ZIP file

Everything needed to check your work: source code, CAD and model files, simulation configs, datasets, test outputs, bench measurements.

Report

1–3 pages

The written version of your pitch: what exists today and what is new about yours, who uses it and the task it changes, how it works, what you built and what the results show, its limits, and where it goes next.

WHAT YOUR DEMO SHOULD PROVE

Real input	Real data or a realistic simulation, not a scripted happy path.
Bad conditions	Night, rain, noise, clutter or canopy, whichever applies to you. Show what happens.
A baseline	Compare against something that already exists, and name it.
Owned limits	Say what works, what is stubbed and what breaks it before anyone asks.

WHAT YOUR CHALLENGE MUST SHOW

On top of the above. See your challenge document for full detail.

01 Green Corridor	A believable mechanism: a bench rig, a simulation, or one subsystem working. How it handles no GPS or link under canopy, heat, salt and fungus, how many operators it needs, and how it is recovered if it fails somewhere bad.
02 Creative Sensing	Your false alarm rate against a real background, not only detection range. State whether you are solving cued or uncued search, and what one unit costs to deploy.
03 Interceptors	One layer, built in software, measured against a stated baseline. Include seeker cost in your unit cost. – Drone & propulsion: time-to-speed, sustained top speed, thermal limit, structural margin in a high-G turn. Bring the 3D-printed article. – Terminal guidance: latency budget, hit rate and miss distance against proportional navigation, and a decoy or bird rejected with the run aborted. – Swarm deployment: leakage against a one-round-per-target baseline, drone-to-drone coordination, reassignment when a round fails, collision avoidance. – Patrol & sustainment: coverage over a continuous period, fleet size to keep one interceptor always on station, and the dock design.
04 One Picture, Many Eyes	Many disagreeing inputs turned into one picture someone can act on. Show which inputs would have to be false for the warning to be wrong, and how the picture leads to someone tasking something.

QUESTIONS TO BE READY FOR

- What already does this, and why is yours different?
- Who exactly would use it, and what do they do today?
- What happens at night, in rain or in noise?
- What in the demo is real, and what is stubbed?
- Who would pay for it?

Answer directly. If you do not know, say so.

BEFORE YOU SUBMIT

- | | |
|--|---|
| ☐ We name what already exists | ☐ Limits are said out loud |
| ☐ We name the user and the task | ☐ Deck runs in 3 minutes |
| ☐ Demo runs on real input | ☐ Video is included |
| ☐ Baseline is stated | ☐ Report is 1–3 pages |
